

In the Claims:

This listing of claims will replace all prior versions, and listing, of claims in the application:

1. (Cancelled)

2. (Currently Amended) A reflective liquid crystal display device, comprising:
a liquid crystal layer enclosed with a pair of substrates arranged opposing to each other and a seal member provided on a periphery portion of the pair of substrates;

at least an organic film, a reflective metal film, an overcoat film, an electrode layer, and an orientation film laminated on a liquid crystal layer side of one substrate of the pair of substrates; and

wherein the organic film is formed the organic film has an outer periphery end portion and the outer periphery end portion of the organic film is located in an inside portion in a region inside the end of an inner perimeter side of the seal member provided on the periphery portion of the substrates in a plan view of the substrates.

3. (Previously Presented) The reflective liquid crystal display device according to Claim 2, wherein the organic film is formed in a region 0 mm to 5 mm inside the end of the inner perimeter side of the seal member provided on the periphery portion of the substrates.

4. (Previously Presented) The reflective liquid crystal display device according to Claim 2, wherein the end of the inner perimeter side of the seal member is arranged outside an inclined portion formed on a surface of the electrode layer by the overcoat film surmounting a height difference formed between the organic film and the one substrate.

5. (Previously Presented) The reflective liquid crystal display device according to Claim 2, wherein the overcoat film is formed to cover an end of the organic film.

6. (Original) The reflective liquid crystal display device according to Claim 2, wherein color filters are directly formed on the reflective metal film.

7. -16. (Cancelled)
